## CORONAVIRUS DISEASE 2019 (COVID-19) DAILY EPIDEMIOLOGY UPDATE

Updated: 27 May 2020, 11:00 ET

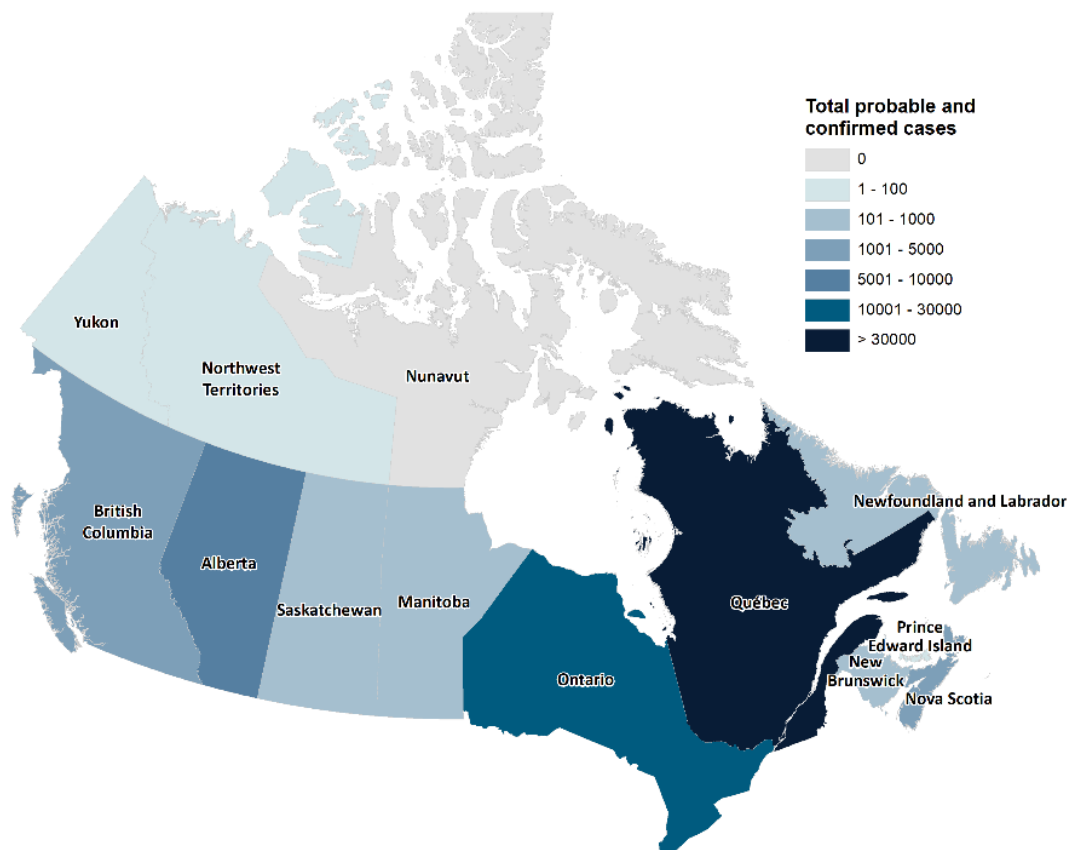

86 939 CONFIRMED CASES	45 766 (53%) RECOVERED	6 671 (7.7%) DEATHS
941 NEW CASES	40 658 PEOPLE TESTED PER 1 000 000	5.3% PERCENT POSITIVE (CUMULATIVE)

### KEY UPDATES

- There is a decreasing trend in the number of newly reported cases.
- The majority of cases (86%) and deaths (94%) continue to be reported from Quebec and Ontario.
- **Note:** Today's epidemiological summary now includes more complete information for 86 189 cases (99% of all reported cases).
- With this more complete data set, we observed:
  - Overall, case distribution did not change for demographics and hospitalization proportions.
  - Notable differences were observed regarding exposure (Figure 2) where the proportion of international travellers is now lower than in previous reports, due to the increase in denominator.
  - Due to ongoing data upload processes of new case data received by PHAC, the clinical presentation data is not included in this report; updated data will be included once it has been validated.

## DEMOGRAPHIC DISTRIBUTION

- Thirty-seven percent (37%) of cases are 60 years and over.
- The highest proportion of cases are among those aged 40-59 years (31%), followed by those aged 20-39 years (26%); 6% of cases were ≤ 19 years of age.
- Fifty-seven percent (57%) of cases are females.

## TEMPORAL DISTRIBUTION BY EXPOSURE CATEGORY

- Of the 83 014 cases with information on exposure provided, 3 851 cases (5%) reported having travelled outside of Canada, 68 747 (83%) cases were due to domestic acquisition, and 10 416 (13%) have information pending.
  - Among domestic acquired cases, 56% (n=38 779) involved known contact with a COVID case.

**Figure 2.** Number of newly reported COVID-19 cases in Canada, by date of illness onset and exposure (n=78 919)

\*If date of illness onset was not available, the earliest of the following dates was used as an estimate in the following order: Specimen Collection Date and Laboratory Testing Date.

**Note:** The shaded area represents a period of time (lag time) where it is expected that cases have occurred but have not yet been reported nationally.

## LABORATORY TESTING

Over **1 528 315 people** have been tested for COVID-19 in Canada (Table 3). This corresponds to a test rate of **40 658** per million population. The percent positive is **5.3%**, which represents the number of positive tests to the total number of tests undertaken.

**Table 3.** Summary of COVID-19 testing reported in Canada by location as of 27 May

‡For provinces and territories which report the number of tests completed, mathematical formula is used to estimate the number of unique people tested. \*Includes 76 repatriated travellers tested.

**Note:** Laboratory testing numbers may be underestimated due to reporting delays and may not include additional sentinel surveillance or other testing conducted in the P/T.

For the week of May 17 to 23, 151 879 persons were tested and the daily average percent positive over that same period was 4.4% (Figure 3).

## CASE SEVERITY

- **8 110 cases (16%)** reported hospitalization, including **1 605 (20%)** admitted to the ICU, and **415 (5%)** of hospitalizations requiring mechanical ventilation.
- From the 522 hospitalized cases for which clinical presentation was reported, 380 (73%) reported having one or more pre-existing conditions.

## FLUWATCHERS

**FluWatchers** is an online health surveillance system that relies on volunteer reports to track spread of flu-like illness across Canada.

In the context of the COVID-19 pandemic, FluWatchers is shifting focus to track COVID-19 symptoms over the spring and summer months.

In the week of May 17, 2020, 11,138 participants reported into the FluWatchers program. A total of 15 participants (0.1%) reported cough and fever.

Among the 15 participants reporting cough and fever:

- 5 (33%) sought medical attention
- 1 (7%) were tested
  - The one test did not have a result at the time of reporting

Additionally, 200 participants (2%) reported having a cough and at least one other symptom\* in the week of May 17, 2020. Eighteen of these participants reported being tested (13 tests were negative and 5 results were unavailable at the time of reporting).

*\*sore throat, fatigue/exhaustion, diarrhea/vomiting/stomach ache, joint pain, muscle pain, shortness of breath and headache*

## INTERNATIONAL

A summary of the cumulative cases of COVID-19 in Canada compared to other countries, by date of report, can be seen in **Figure 6**.

Up-to-date country-specific risk levels are found on [travel health notices](#).

For more information on COVID-19 internationally, please refer to the [World Health Organization COVID-19 Situation Report](#).

**Figure 6.** Cumulative cases of COVID-19 in Canada compared to other countries by date of report

**Note:** At this time, results from international comparisons should be interpreted with caution. The number of tests conducted and indications for testing by country all have a large influence on total reported case counts. Therefore, the data displayed does not necessarily represent the true size of outbreak within each country.
